

ZETA buys into ENERTEC

More extensive range of services and benefits for customers

ZETA has established itself as a general planner for the pharmaceutical and biotech industries with its core competencies in engineering, plant construction, automation, digitization, HVAC and clean room design. The ZETA Group is now expanding its range of services for customers, particularly in the HVAC and energy technology sectors through its ever increasing participation in the consulting and engineering company ENERTEC.

The ZETA Group attaches great importance to the continuous development of its comprehensive range of services. In recent years, the Austrian company has developed into a one-stop shop for the biopharmaceutical industry, which, in addition to system engineering, also combines the planning of HVAC, clean room and building technology under one roof. In order to proceed in this direction, ZETA is further working with its long-term project partner, the established consulting and engineering company ENERTEC. This strengthens ZETA's market position in the HVAC sector (heating, ventilation, air conditioning) and continues the growth path it has embarked on.

Expert in thermal energy technology

ENERTEC is an excellently positioned engineering and consulting office, the Austrian current market leader in the field of thermal energy technology. The extensive service portfolio includes refrigeration technology, classic building technology with heating, air conditioning, ventilation and sanitation, media supply for industrial processes and industrial combined heat and power. "Our around 40 employees have successfully implemented more than 2,400 projects for 680 customers in 33 countries around the world over the past 29 years. The customers of both companies benefit from ZETA's participation in ENERTEC and the now even larger pool of know-how. This will secure the further growth of ENERTEC and ZETA," emphasizes Eugen Naftz, Managing Director of ENERTEC.

Many years of know-how and high customer satisfaction

ENERTEC has long-standing regular customers, recurring framework agreements and has established itself as a competent partner with clients from industry, large trade and the service sector. These include customers from the fields of vehicle technology (MAGNA), pharmaceuticals (ZETA), paper and pulp (Sappi, MONDI), semiconductor manufacturing (Infineon, AMS, AT&S) and energy supply (Wien Energie, Stadtwerke München).

Common success story

"Our cooperation with ENERTEC is not new territory for ZETA. We have been successfully implementing projects together for our customers Octapharma, Boehringer-Ingelheim, Zentis and ERBER Group for more than five years," explains Andreas Marchler, Managing Director of ZETA. By working with the Austrian engineering and consulting office, ZETA is intensifying this cooperation in order to have many more success stories in the future.

About ZETA

The ZETA Group, with 800 highly qualified employees and 13 subsidiaries worldwide, specializes in planning, automation, digitization and maintenance of customized biopharmaceutical facilities for aseptic process solutions. ZETA acts as a one-stop shop, combining plant engineering with HVAC and cleanroom design.

Biopharmaceutical active ingredients, such as anti-cancer drugs, insulin, vaccines and infusions are produced in these highly complex, "tailor-made" facilities. ZETA supports its customers along the entire drug development and manufacturing pathway with sophisticated solutions from laboratory to industrial production scale. Through its Smart Engineering Services, ZETA creates digital twins of process plants and has thus established itself as a market leader for digital solutions in the pharmaceutical and biotech industry.
